RESUME

Mots-clés: Caesalpinioideae, Faboideae, Mimosoideae, Leguminosae, Burundi

Ce catalogue préliminaire concerne les Fabaceae du Burundi. Une liste de 67 genres et 261 espèces basée sur l'analyse de 2533 échantillons récoltés entre 1922 et 2005 a été dressée. Les références de tous les échantillons conservés aux herbiers de l'Université du Burundi (BU), de l'Université libre de Bruxelles (BRLU) et du Jardin Botanique National de Belgique (BR) ont été précisées. Les résultats issus de cette étude seront utilisés ultérieurement pour la réalisation du catalogue complet de la flore du Burundi.

Key-words: Caesalpinioideae, Faboideae, Mimosoideae, Leguminosae, Burundi

ABSTRACT

The preliminary checklist of the Fabaceae of Burundi is presented. A list of 67 genera and 261 species based on 2533 herbarium specimens collected between 1922 and 2005 has been established. The references of all specimens conserved in the herbaria of the University of Burundi (BU), the Université libre de Bruxelles (BRLU) and the National Botanical Garden of Belgium (BR) have been specified. The results will contribute to write the complete checklist of the Burundian flora.

1. INTRODUCTION

La famille des Fabaceae (=Leguminosae) est une des plus importantes des plantes supérieures. Elle compte 18.500 espèces classées en 650 genres et trois sous-familles: les Caesalpinioideae, Faboideae (=Papilionoideae) et Mimosoideae (Polhill et Raven, 1981). L'intérêt de la famille a été démontré dans plusieurs études et nombreuses espèces des Fabaceae sont utilisées comme plantes alimentaires, fourragères, ou comme fertilisants verts (Skerman, 1992, Bado, 2002, Lavin et al., 2005). La famille est bien connue sur le plan taxonomique au niveau mondial et les descriptions ont été publiées sous formes de Flores ou de catalogues: Gilbert & Boutique, 1952; Wilczek et al.,

1952; Toussaint et al., 1953; Hauman et al., 1954a; Hauman et al., 1954b; Polhill (1982); Troupin (1978, 1982); Lock (1989), Lewis et al. (2005); Estrella (2005, 2007), Soarens et al. (2007) et Lebrun & Stork (2008). Actuellement, 67 genres et 261 espèces sont connus pour le Burundi (Ndayishimiye et al., 2010). Le présent catalogue consiste en une présentation des 2533 spécimens de Fabaceae collectés au Burundi entre 1922 et 2005. C'est le deuxième catalogue présenté pour le Burundi après celui des Poaceae écrit par Ndabaneze (1989). La synthèse sur la répartition du nombre d'échantillons, d'espèces et de genres présentée dans ce catalogue est indiquée dans le Tableau 1.

Tableau 1. Synthèse des Fabaceae du Burundi (*Les proportions du nombre d'échantillons, d'espèces ou de genres par sous-famille sont mentionnées entre parenthèses*)

| Sous-famille | Nombre d'échantillons (%) | Nombre d'espèces (%) | Nombre de genres (%) |
|------------------|---------------------------|----------------------|----------------------|
| Caesalpinioideae | 175 (6,9) | 29 (11,1) | 13 (19,4) |
| Faboideae | 2208 (87,2) | 212 (81,2) | 47 (70,1) |
| Mimosoideae | 150 (5,9) | 20 (7,7) | 7 (10,5) |
| Total | 2533 (100,0) | 261 (100,0) | 67 (100,0) |

Les échantillons présentés dans ce catalogue sont conservés principalement aux herbaria de l'Université du Burundi (BU), de l'Université libre de Bruxelles (BRLU) et du Jardin Botanique National de Belgique (BR). Une carte visualisant la distribution spatiale de toutes les espèces de Fabaceae dans les quatre districts du Burundi est présentée à la Figure 1. Afin de permettre l'utilisation facile du catalogue, nous avons présenté les genres et les espèces par ordre alphabétique. Devant le nom de chaque genre, nous avons indiqué entre parenthèses le nom de la sous-famille correspondante suivi du nombre d'espèces et d'échantillons pour ce genre. Les références de chaque échantillon ont été mentionnées directement après le nom du récolteur avec le numéro de l'échantillon entre parenthèses, l'herbarium où l'échantillon est conservé (BU, BRLU, BR), le lieu, l'altitude et la date de récolte. Les informations sur l'altitude ont été ajoutées sur certaines étiquettes en nous référant à l'index des lieux de récolte du Burundi (Ndabaneze, 1983). Les échantillons sans numéro ont été signalés par le symbole (S.n) et ceux sans noms de récolteur par le symbole (S.R). Les informations sur la synonymie ont été obtenues en consultant Lock (1989), Lebrun & Stork (2008) ainsi que les bases de données ILDIS disponibles sur le site : www.ildis.org. La distribution des espèces de Fabaceae au Burundi a été représentée par les chiffres 1, 2, 3 ou 4 correspondant aux quatre districts phytogéographiques du Burundi. La répartition des espèces en Afrique centrale a été précisée en mentionnant le territoire phytogéographique suivant le système de White (1979, 1983). La description des territoires phytogéographiques a été indiquée par les symboles I, II, VIII, X, XI et XII. Les références concernant la description de l'espèce en Afrique ont été ajoutées sur chaque espèce en mentionnant les initiales des noms des différents pays suivant la terminologie proposée par Lock (1989). Les résultats de cette étude constituent une première contribution à l'élaboration d'un catalogue complet des Fabaceae du Burundi. Ce catalogue nécessite encore des améliorations pour le rendre complet. En effet, certaines espèces connues de la flore du Burundi (ex. *Albizia grandibracteata* Taub.) ne figurent pas dans ce catalogue par manque de

spécimens de références. Deux espèces, *Desmodium diversifolium* (Poir.) DC et *Caesalpinia angolensis* (Oliv.) Herend. & Zarucchi, sont mal connues et nécessitent des études complémentaires pour la connaissance de leurs descriptions et distributions. Il sera possible de poursuivre cette étude en y incluant les collections récentes et tous les spécimens manquants qui sont probablement conservés dans les herbaria non visités. L'écologie des espèces basée sur l'analyse des habitats sera documentée et complétée. Des cartes de répartitions de chaque espèce au Burundi accompagneront la version finale du catalogue.

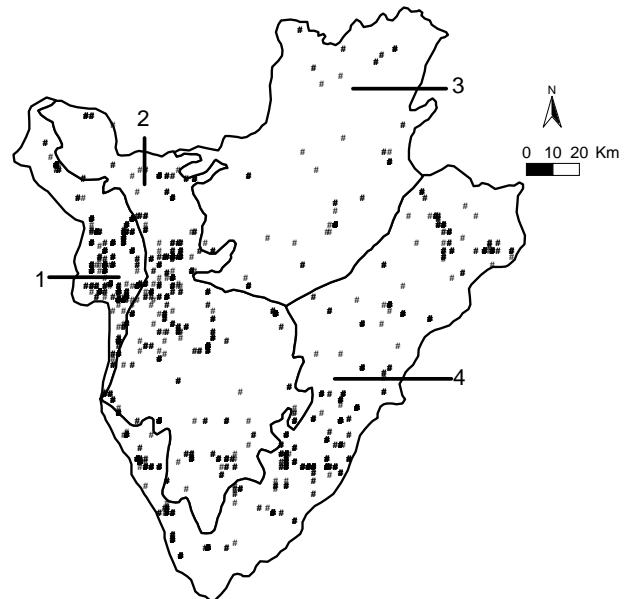

Figure 1. Répartition des Fabaceae dans les quatre districts phytogéographiques du Burundi (Lambinon & Serusiaux, 1977). 1: District du Graben occidental, 2: District afro-montagnard, 3: District du Rwanda-Burundi, 4: District du Mosso Malagarazi. Chaque point (#) indique les localités de récolte des espèces des Fabaceae au Burundi. La carte est obtenue par la projection des coordonnées géographiques (latitude et longitude) indiquées sur les étiquettes des herbiers.

REMERCIEMENTS

Les auteurs remercient la Coopération Technique Belge (CTB) et le Gouvernement du Burundi pour leur appui financier, le personnel du Jardin Botanique National de Belgique pour son accueil et sa collaboration durant le séjour passé à l'Herbarium. Nous remercions également les lecteurs anonymes qui ont contribué à améliorer la qualité du manuscrit.
